Fraction Addition in Words

two thirds plus four sixths = $\dfrac{2}{3}$ + $\dfrac{4}{6}$ = $\dfrac{4}{6}$ + $\dfrac{4}{6}$ = $\dfrac{8}{6}$ = $1\ \dfrac{2}{6}$ = $1\ \dfrac{1}{3}$

one half plus two sixths =

two thirds plus two ninths =

one half plus two fourths =

one half plus three fourths =

one third plus six ninths =

three fourths plus two twelfths =

one third plus eight ninths =

Answers

two thirds plus four sixths =

$$\frac{2}{3} + \frac{4}{6} = \frac{4}{6} + \frac{4}{6} = \frac{8}{6} = 1\frac{2}{6} = 1\frac{1}{3}$$

one half plus two sixths =

$$\frac{1}{2} + \frac{2}{6} = \frac{3}{6} + \frac{2}{6} = \frac{5}{6}$$

two thirds plus two ninths =

$$\frac{2}{3} + \frac{2}{9} = \frac{6}{9} + \frac{2}{9} = \frac{8}{9}$$

one half plus two fourths =

$$\frac{1}{2} + \frac{2}{4} = \frac{2}{4} + \frac{2}{4} = \frac{4}{4} = 1$$

one half plus three fourths =

$$\frac{1}{2} + \frac{3}{4} = \frac{2}{4} + \frac{3}{4} = \frac{5}{4} = 1\frac{1}{4}$$

one third plus six ninths =

$$\frac{1}{3} + \frac{6}{9} = \frac{3}{9} + \frac{6}{9} = \frac{9}{9} = 1$$

three fourths plus two twelfths =

$$\frac{3}{4} + \frac{2}{12} = \frac{9}{12} + \frac{2}{12} = \frac{11}{12}$$

one third plus eight ninths =

$$\frac{1}{3} + \frac{8}{9} = \frac{3}{9} + \frac{8}{9} = \frac{11}{9} = 1\frac{2}{9}$$
