Fraction Addition in Words

two thirds plus six ninths = $\dfrac{2}{3}$ + $\dfrac{6}{9}$ = $\dfrac{6}{9}$ + $\dfrac{6}{9}$ = $\dfrac{12}{9}$ = $1\dfrac{3}{9}$ = $1\dfrac{1}{3}$

one third plus five sixths =

one half plus one fourth =

one half plus four sixths =

one half plus two fourths =

one half plus four sixths =

three fourths plus five eighths =

one half plus three sixths =

Answers

two thirds plus six ninths =

$$\frac{2}{3} + \frac{6}{9} = \frac{6}{9} + \frac{6}{9} = \frac{12}{9} = 1\frac{3}{9} = 1\frac{1}{3}$$

one third plus five sixths =

$$\frac{1}{3} + \frac{5}{6} = \frac{2}{6} + \frac{5}{6} = \frac{7}{6} = 1\frac{1}{6}$$

one half plus one fourth =

$$\frac{1}{2} + \frac{1}{4} = \frac{2}{4} + \frac{1}{4} = \frac{3}{4}$$

one half plus four sixths =

$$\frac{1}{2} + \frac{4}{6} = \frac{3}{6} + \frac{4}{6} = \frac{7}{6} = 1\frac{1}{6}$$

one half plus two fourths =

$$\frac{1}{2} + \frac{2}{4} = \frac{2}{4} + \frac{2}{4} = \frac{4}{4} = 1$$

one half plus four sixths =

$$\frac{1}{2} + \frac{4}{6} = \frac{3}{6} + \frac{4}{6} = \frac{7}{6} = 1\frac{1}{6}$$

three fourths plus five eighths =

$$\frac{3}{4} + \frac{5}{8} = \frac{6}{8} + \frac{5}{8} = \frac{11}{8} = 1\frac{3}{8}$$

one half plus three sixths =

$$\frac{1}{2} + \frac{3}{6} = \frac{3}{6} + \frac{3}{6} = \frac{6}{6} = 1$$
